PARTICULAR NOTES:

1. THE EXISTING POLE AND FOUNDATION ARE EXPECTED TO BE REMOVED/UN-INSTALLED PRIOR TO STARTING ANY OF THE NEW SITE CONSTRUCTION ACTIVITIES.
2. UPON THE REMOVAL OF THE EXISTING FOUNDATION (BELOW GRADE) OF WHICH THE TYPE WON'T BE IDENTIFIED/KNOWN TILL THE TIME OF THE REMOVAL/DEMOLITION AND AS A PREPARATION FOR THE HELICAL ANCHOR INSTALLATION, THE RESULTING EXCAVATION SHOULD BE PROPERLY BACKFILLED TO THE GROUND LEVEL INTO LAYERS 6" THICK EACH WITH SUITABLE SOIL MATERIALS CLASSIFIED AS (ML-SM) - NOT FINER THAN ML (SANDY SILT) AND NOT MORE GRANULAR THAN SM (SILTY SAND) AS PER THE USCS - AND WELL COMPACTED TO AT LEAST 95% OF THE MAXIMUM DRY DENSITY OBTAINED BY MODIFIED PROCTOR ASTM D 698 PRIOR TO THE INSTALLATION OF THE HELICAL ANCHOR. THE SAME IS TO BE APPLIED/IMPLEMENTED IN CASE OF JUSTIFIABLY UTILIZING THE FOUNDATION TYPE ALTERNATIVE: REINFORCED CONCRETE DRILLED SHAFT AS THE FOUNDATION.
3. DEBRIS, BOULDERS, HIGHLY PLASTIC SOILS, BRICKS, ORGANIC/CONTAMINATED MATERIALS OR SIMILAR ARE GENERALLY CONSIDERED UNSUITABLE FOR USE AS BACKFILLING MATERIALS.

ECP LIGHT POLE FOUNDATION INSTALLATION PROCEDURE

- 1-866-327-0007
fb.com/getecp
twitter.com/getecp
getecp.com

General Considerations:

- Always inspect adapters, drive tool assembly and anchor for damage or contamination
- Be sure all equipment and accessories are available before starting installation procedures
- Verify that no below ground or above ground utilities are in a place that interferes with planned installation of Helical Anchors
- Verify minimum installing torque requirement
- Verify that installation torque record form is available
- Use moderate crowd (downward pressure) on anchor during installation
- Control installation rotation speed between 20 rpm and 25 rpm
- Always maintain proper alignment between torque motor / drive tool assembly and anchor during installation
- Goal: Advance 3" per revolution to match the helix pitch

Before a light pole foundation can be installed, the installation equipment must be outfitted with the appropriate tooling. The Kelly bar hex adapter is directly attached to the equipments output shaft by a single bolt. The universal driving tool assembly that adapts to the foundation anchor is securely bolted to the Kelly bar hex adapter.

- Attach the driving tool assembly to the light pole foundation base plate utilizing two of the bolts provided with the foundation anchor.
- Raise the foundation anchor upright, with the universal drive tool assembly attached, and the universal drive tool foundation assembly to the Kelly bar.
- Raise the Kelly bar until the foundation swings free of the ground. Maneuver the Kelly bar until the point of the foundation anchor is over the predetermined installation location.

- Lower the Kelly bar until the point of the foundation anchor is forced into the ground and the helical flight is flush with the ground surface.

- 1-866-327-0007
fb.com/getecp
twitter.com/getecp
getecp.com

- Utilize a magnetic level to plumb the foundation anchor by checking the shaft on two sides at 90° from each other.

- Apply downward pressure on the foundation anchor and rotate it in the clockwise direction.

- When the helical flight has penetrated approximately 1' in to the ground, re-plumb the foundation anchor as suggested in step 5.

- Continue to install the foundation anchor, applying downward pressure and correcting the Kelly bar's orientation so the foundation embeds itself in one smooth continuous motion. A groundman can be of assistance in keeping the foundation anchor plumb during installation.

- When the base plate of the foundation anchor is 1 to 2 inches above grade, stop the installation equipment. Remove the Kelly bar adapter and the installation tool.

- Attach the streetlight to the foundation with the appropriate hardware. (Please note that if the cableway is below grade, especially in sand, the soil may spill into the foundation cavity causing settlement around the base plate. As a preventative measure, the cableway may be blocked with filter cloth or the cavity filled with sand after installing the conduits.) Back fill and tamp trench.

**Installation Torque NOT To Exceed 40,000 FT. LBS. **

ECP GENERAL INSTALLATION GUIDELINES
(RECEIVED FROM ECP)

TECHNICAL NOTES:

- The Proprietary Helical Anchor foundation type presented in the plans have been designed (and supplied by Earth Contact Products, LLC; ECP - www.earthcontactproducts.com) based on considerations/criteria of minimum geotechnical/shear strength parameters of $\phi = 30$ degrees, $c = 500$ psf, and no ground water within the anchor length (corresponds to values equivalent/correlated to minimum SPT > 4 - as to be satisfactorily verified by Construction/Helical Anchor Installation Subcontractor/Vendor) for the subsurface conditions underlying the proposed site & following ultimate/factored controlling structural reactions at the single-system pole bottom fixed base connection for design wind speed not exceeding 150 mph:
 - Axial Force/Compression = 450 lb for Aluminum Pole & 628 lb for Steel Pole
 - Flexural Moment = 8,371 lb.ft
 - Torsional Moment = 326 lb.ft
 - Shear Force = 895 lb
- Helical Foundations Type shall not be used when rock layers, large cobbles, or/and sinkholes/cavities are encountered above the seating depth - to be verified as needed by the Construction/Helical Anchor Installation Subcontractor/Vendor.
- The 7 ft long and 8-5/8" diameter Helical Anchor Foundations also should not be used when soils of low shear strength parameters (values equivalent/correlated to

- SPT < 5) are encountered on site to be verified as needed by the Construction/Helical Anchor Installation Subcontractor/Vendor.
- ECP's general installation guidelines for the LPS product line are presented in this sheet and should be duly and relevantly considered and followed as needed by Construction/Helical Anchor Installation Subcontractor/Vendor.
- The maximum torque indicated at the end of the installation guidelines is based on the proposed/selected 7 ft long and 8-5/8" diameter Helical Anchor - If the anchor/shaft diameter changes, ECP should be consulted as the torque value may change as well.
- As applicable, It is the full responsibility of the Construction/Helical Anchor Installation Subcontractor/Vendor to take any necessary actions/measures, prior to or/and during construction to technically verify the geo parameters considered by ECP in their design and submit the verification report/documentation to VM representat and EOR.
- Should minimum geotechnical/shear strength parameters are not satisfactorily met, the Construction/Helical Anchor Installation Subcontractor/Vendor should timely notify notify VM representative and EOR to contact ECP for any required modifications or adjustment.
- Sheets 6 to 9 should not be separately read or/and interpreted but together in conjunction/integration with one another.

ECP Foundation Standard Selection Guide

DESIGN LATERAL LOAD	DESIGN OVERTURNING MOMENT	RECOMMENDED HELICAL FOUNDATION
500-1,000 lb.	<10,500 ft-lb.	6-5/8" Dia x 7' Long
1,000-1,200 lb.	<21,000 ft-lb.	8-5/8" Dia x 7' Long
1,200-1,500 lb.	<37,000 ft-lb.	10-3/4" Dia x 7' Long

- The table above requires a minimum soil strength of $N = 5$. This recommendation is valid for both cohesive and cohesionless soils.
- For sites with soil $N = 2$ to 4 in the upper 5', ECP recommends increasing the foundation standard length from 7' to 10' in order to achieve the tabulated capacities.
- For sites that have blow counts over $N = 15$, 5' standard lengths may be selected to reduce the torque required to fully install the shaft.

- CONCRETE: PORTLAND CEMENT (PC) CLASS I WITH A MINIMUM 28-DAY COMPRESSIVE STRENGTH OF 3,000 PSI.
- REINFORCING STEEL: ASTM A615, GRADE 60.
- ANCHOR RODS/BOLTS:
 - RODS/BOLTS: ASTM F1554, GRADE 55
 - NUTS: ASTM A563
 - WASHERS: ASTM F436
 - GALVANIZE ALL ITEMS IN ACCORDANCE WITH ASTM F2329.
- FOR PRECAST REINFORCED CONCRETE SHAFT FOUNDATIONS IF USED, FILL THE VOID AROUND THE FOUNDATION WITH FLOWABLE FILL OR CLEAN SANDS USING HYDRAULIC METHODS TO A LEVEL 6 INCHES BELOW GRADE.
- AFTER THE POLE IS SET IN FINAL POSITION AND ALIGNMENT, APPLY A COAT OF ZINC-RICH PAINT TO THE ANCHOR ROD THREADS AND NUTS TO SEAL THE JOINT BETWEEN THE NUT AND ANCHOR ROD.
- WHERE FOUNDATION ABUTS THE SIDEWALK, THE TOP OF THE FOUNDATION SHALL BE LEVEL WITH THE SIDEWALK. FOR ALL OTHER CASES, THE TOP OF THE FOUNDATION SHALL NOT BE MORE THAN 3 INCHES ABOVE GRADE.

REINFORCED CONCRETE DRILLED SHAFT DATA:

POLE TYPE	POLE HEIGHT	DIAMETER	DEPTH	BOLT CIRCLE (B.C.)	FOUNDATION REINFORCEMENT		ANCHOR RODS		
					VERTICAL	HORIZONTAL	DIA	LENGTH	THREAD LENGTH (TOP)
REAR POLE ASSEMBLY	20'	2'-6"	7'-0"	14 $\frac{3}{16}$ "	8 - NO .8	NO. 4 @ 12" C-C	1.00"	42.00"	6"

- REFER TO SHEETS NO. 4 & 5 FOR THE POLE DETAILS

TECHNICAL CONSIDERATIONS:

- THE R.C. DRILLED SHAFT FOUNDATION TYPE DESIGN PRESENTED IN THE PLANS HAVE BEEN DESIGNED, BY A PROFESSIONAL ENGINEER UNDER A SEPARATE AGREEMENT, BASED ON TENTATIVE CONSIDERATIONS/CRITERIA OF STRUCTURAL LOADING CONDITIONS ON THE POLE (150 MPH DESIGN WIND SPEED) AND GEOTECHNICAL/SHEAR STRENGTH PARAMETERS (SATURATED SAND $\phi = 30$ DEGREES & $N_{spt} \geq 15$ BLOWS) FOR THE SUBSURFACE CONDITIONS UNDERLYING THE PROPOSED SITE.
- IT IS THE FULL RESPONSIBILITY OF THE CONSTRUCTION SUBCONTRACTOR/VENDOR TO TAKE ANY NECESSARY ACTIONS/MEASURES, PRIOR TO OR/AND DURING CONSTRUCTION TO TECHNICALLY VERIFY OR MODIFY THE DESIGN PRESENTED IN THE PLANS AND SUBMIT A PROFESSIONAL VERIFICATION REPORT/DOCUMENTATION TO VM/EOR REPRESENTATIVE FOR REVIEW AND RECORD.
- ANY EXISTING UNCONTROLLED FILL, DEBRIS, BOULDERS, HIGHLY PLASTIC SOILS, BRICKS, TOP SOILS, ORGANIC/CONTAMINATED MATERIALS OR SIMILAR, IF ENCOUNTERED IN THE ZONES OF INFLUENCES, ARE GENERALLY CONSIDERED UNSUITABLE FOR SUBGRADE MATERIALS FOR THE FOUNDATIONS PRESENTED IN THE PLANS, UNLESS TECHNICALLY VERIFIED AND DOCUMENTED OTHERWISE, AND REPORTED TO VM/EOR REPRESENTATIVE FOR REVIEW AND RECORD.
